

Cutting-edge technology and a commitment to excellence: ATC empowers high-torque, critical, and demanding valve applications and operations, delivering higher productivity, minimized downtime, and enhanced workplace safety.

Actuation technology solutions

Mining Slurry pipelines
Pumping stations
Autoclave HPAL

The best option

- Field-proven technology
- Market leader
- One-Stop-Shop
- Europe-based production

Take your critical operations to the next level.

Why Our Actuators are the Game-Changer?

Robust Reliability

Built to withstand harsh mining environments, our hydraulic actuators provide consistent, long-lasting performance, even under extreme conditions.

Critical Control

Our solutions ensure reliable control over valve operations and other critical processes, reducing errors and optimizing output.

Energy Efficiency at its Core

ATC actuators harness optimized designs to reduce energy wastage while maintaining peak performance, lowering costs and environmental impact.

Seamless Integration

Whether you need retrofitting for existing systems or new installations, our actuators are designed for smooth integration, minimizing downtime and maximizing impact.

No two critical operations are alike. That's why we collaborate closely with clients to deliver actuators tailored to their specific applications and requirements.

- Field-proven for 20+ years.
- In-house extensive performance testing available.
- Different cylindrical or symmetrical actuator design options.

Rotary Vane

Torque-efficient
helical slot-type

Symmetrical yoke

Unlock the future of critical valve automation!
